

Fahad Ahmed

Platform & DevOps Engineer

fahad24ahmed@gmail.com | (949) 385-1730 | Irvine, CA | <https://fahmed.org>

Work Experience

Senior DevOps Engineer | Ingram Micro | Irvine, CA | 10/2024 - Present

- **Tech:** AWS (Organizations, Control Tower, IAM Identity Center, EKS, RDS, Lambda, Step Functions, SSM, CloudWatch, Network Firewall, Site-to-Site VPN); Terraform; Kubernetes; Azure Pipelines; CI/CD (OIDC federation, tfsec/tflint/Trivy); Python; Bash; Docker; Sophos NDR; Linux; Networking (TLS, DNS, VPN)
- Architected and built a multi-account AWS landing zone for a telehealth company and the reusable Terraform blueprint that provisions compliant per-app-group EKS environments — delivered prod and non-prod for the first group (41 apps and services), setting the pattern for the rest of their Azure estate.
- Led and automated the migration of 400+ production AWS accounts to a new payer AWS Organization with a custom Python script, covering bulk IAM Identity Center reassignment, billing cutover, and post-migration validation.
- Architected a segmented AWS monitoring solution for a regional water utility, deploying a Sophos NDR appliance in a dedicated peered VPC with traffic mirroring across application and database tiers — validated via blue/green instances built from production snapshots, enabling full east-west visibility with zero production disruption.
- Designed a fully automated environment-scheduling solution using AWS Step Functions, Lambda (Python), Parameter Store, Terraform, and SNS, cutting non-prod cloud operating costs by 50%.

DevOps Engineer II “Platform Engineer” | McKinsey | Los Angeles, CA | 04/2022 - 04/2024

- **Tech:** AWS (EKS, ECR, Kinesis, Lambda); Terraform; Kubernetes; GitOps (ArgoCD); GitHub Actions; Docker; Keycloak; Vault; Grafana; Prometheus; Python; PostgreSQL; TypeScript; Linux
- Built a self-service internal developer platform on AWS EKS that took 12 engineering teams from commit to compliant production deployment in minutes instead of days: Terraform-provisioned EKS with node autoscaling and standardized Kubernetes manifest templates with Keycloak auth, Vault secrets, and TLS/subdomain automation baked in.
- Standardized GitOps delivery with GitHub Actions and ArgoCD: commits auto-built, tagged, and pushed to ECR, with ArgoCD syncing deployments and rolling back failed health checks; every app shipped compliant and observable by default with org-wide Grafana log and metric visibility.
- Built a real-time cloud analytics tool for renewable energy tech using AWS Kinesis and Python for rapid data transforms and insights.
- Wrote Python (Pandas) AWS Lambda functions to classify and import Excel data into a PostgreSQL database.

DevOps Engineer | Slalom | Irvine, CA | 11/2018 - 03/2022

- **Tech:** AWS (EC2, Auto Scaling Groups, ALB, RDS SQL Server, Lambda, Kinesis, Elasticsearch); Terraform; Azure Pipelines; CI/CD; Python; Bash; Linux; Networking (TLS, VPN)
- Developed a global logging solution for energy IoT devices using AWS Lambda (Python), Kinesis and Elasticsearch across multiple AWS accounts.
- Led the on-prem to AWS migration of three multi-tier insurance and mortgage applications with zero-downtime rolling deployments using Auto Scaling Group lifecycle hooks and Python bootstrapping, reducing infrastructure costs by 50% through scheduled scale-in.
- Established peer-reviewed Terraform workflows for client teams: validate, plan, and security scanning in CI on every pull request, with terraform apply gated behind approved merges; created reusable Terraform modules adopted across teams.

Work Experience

Software Engineer | Axos Clearing | Aliso Viejo, CA | 06/2017 - 07/2018

- **Tech:** *Java; Spring; Jenkins; SQL; Linux*
- Innovated trade processing by implementing automation strategies, significantly enhancing efficiency and accuracy, which resulted in a notable reduction in errors and operational time. Using Java, Spring and Jenkins job automation.
- Built a REST API with Spring Boot to perform customized OCR capabilities that interfaces with a monolithic application.

DevOps Engineer | Rapid Healthcare | Irvine, CA | 08/2016 - 06/2017

- **Tech:** *AWS (EC2, Auto Scaling Groups, ALB); Terraform; Docker; Jenkins; PHP; MySQL; Linux*
- Containerized dev environments with Docker for the team's healthcare apps and trained engineers on the workflow, cutting deployment issues by 75%.
- Proposed and led early adoption of Terraform for infrastructure as code.
- Diagnosed recurring outages from resource contention across four apps on one EC2 instance; re-architected into isolated instances behind an ALB with Auto Scaling Groups, resolving the outages.
- Owned the team's first CI/CD implementation with Jenkins, cutting deployment time by 75%.

Education

Bachelor of Science, Computer Science | 2011 - 2016 | Cal Poly Pomona | Pomona, CA

Projects & Certifications

- **Projects:**
 - **Live Infrastructure Platform (<https://fahmed.org>)**
 - Architected and operate a production-grade platform: a 10-node k3s Kubernetes cluster on Proxmox with end-to-end GitOps delivery (ArgoCD, Gitea), HAProxy and Traefik TLS routing with SNI-based access control, Prometheus/Grafana observability, network segmentation, and Terraform/Ansible provisioning
 - **Link My Tunes (Music Link Conversion App)**
 - Tech: AWS (S3, CloudFront); Linux; Github Actions; NestJS; React; Node.js, MongoDB, Typescript; Swift
- **Certifications:** AWS Solutions Architect Professional
