

Work Experience

Ingram Micro | Irvine, CA | Senior Cloud Engineer | 10/2024 - Present

- Designed and implemented a fully automated environment-scheduling solution leveraging AWS Step Functions, Lambda (Python), Parameter Store, Terraform, and SNS notifications, cutting Dev/QA cloud operating costs by 50%.
- Earned the AWS Solutions Architect Professional certification, demonstrating proficiency in cloud architecture, microservice design, distributed systems, and cost-optimized solution engineering.
- Conducted detailed cloud migration cost modeling and provided actionable optimization recommendations, enabling data driven decisions and reducing projected cloud spend for client environments.

Mckinsey & Company | Los Angeles, CA | Software-Cloud Engineer II | 04/2022 - 04/2024

- Built a cloud real time analytics tool for rapid data transforms and insights for renewable energy tech with AWS Kinesis and Python (w/ PyFlink).
- Built a cloud Excel data analytics tool, improving data analysis, visualization and decision-making processes.
- Wrote Terraform IaC to create containers for the frontend (React with Typescript) and backend api (GraphQL).
- Wrote Python (w/ Pandas) within AWS Lambda to classify and import Excel data into SQL (PostgreSQL) database.
- Setup CI/CD workflows with Git and GitHub Actions enhancing development efficiency and real-time feedback.

Slalom | Irvine, CA | Software-Cloud Engineer | 11/2018 - 03/2022

- Developed a global logging solution for energy IoT devices using AWS Lambda (Python), Kinesis and Elasticsearch across multiple AWS accounts.
- Enhanced unit and integration tests for a serverless media content approval app for Amazon Studios, leveraging Python (Pytest), improving the stability of releases.
- Guided teams through cloud migration strategies, emphasizing security and automated deployment, and innovated by creating reusable Terraform modules for widespread team use.

Axos Clearing (Formerly COR Clearing) | Aliso Viejo, CA | Operations Developer | 06/2017 - 07/2018

- Innovated trade processing by implementing automation strategies, significantly enhancing efficiency and accuracy, which resulted in a notable reduction in errors and operational time. Using Java, Spring and Jenkins job automation.

Rapid Healthcare | Irvine, CA | Full Stack Developer | 08/2016 - 06/2017

- Drove the development and launch of transformative healthcare web applications, leveraging modern technologies to enhance patient care and operational workflows. Using AWS EC2 and PHP frameworks

Education

Bachelor of Science, Computer Science | 2011 - 2016 | Cal Poly Pomona | Pomona, CA

Projects, Certifications and Skills

- **Projects:**
 - **Home-Lab**
 - Architected and maintained a production grade home lab infrastructure spanning virtualization (Proxmox), containerization (K3S 10 Node Cluster), network security (pfSense), infrastructure-as-code (Terraform, Ansible), GPU passthrough VMs, and self-hosted services, demonstrating advanced systems engineering and full-stack infrastructure automation capabilities
 - **Link My Tunes (Music Link Conversion App)**
 - Tech: AWS (S3, CloudFront); Linux; Github Actions; NestJS; React; Node.js, MongoDB, Typescript; Swift
- **Certifications:** AWS Solutions Architect Professional and Associate AWS Developer
- **Skills:** Amazon Web Services (AWS); Javascript; Typescript; Python; Java; React; Bash; Terraform; Cloudformation; Kubernetes; Ansible; Docker; Proxmox; DNS; Firewall; Serverless; SQL; NoSQL; Linux; Git; Github Actions; Agile
